

## Calculator Caterpillar

Calculators can help children to understand patterns. Choose a single digit number to write onto the caterpillar. Enter the number you have chosen into the calculator and add ten to it. You will need to show your child how to find the + sign on the calculator.

Keep adding ten this way until you have completed the caterpillar! What do you notice about the number chain?

You can do this activity lots of times with different starting numbers. (you will have to draw some more caterpillars though!)
